Working Guide to Drilling Equipment and Operations offers a practical guide to drilling technologies and procedures. The book begins by introducing basic concepts such as the functions of drilling muds; types of drilling fluids; testing of drilling systems; and completion and workover fluids. This is followed by discussions of the composition of the drill string; air and gas drilling operations; and directional drilling. The book identifies the factors that should be considered for optimized drilling operations: health, safety, and environment; production capability; and drilling implementation. It explains how to control well pressure. It details the process of fishing, i.e. removal of a fish (part of the drill string that separates from the upper remaining portion of the drill string) or junk (small items of non-drillable metals) from the borehole. The remaining chapters cover the different types of casing and casing string design; well cementing; the proper design of tubing; and the environmental aspects of drilling. An action-packed story of the men of the RAAF's No 77 fighter squadron, the only RAAF squadron to take part in the Korean War; initially with propeller driven World War II vintage mustangs which were replaced by meteor jet fighters when the Chinese, with their MiG 15s, entered the war. In June 1950, No 77 Squadron RAAF was in Japan, packed up and ready to go home. Instead, they went to Korea, flying Mustang fighters as part of a UN force aiding South Korea fight invading communists from the north. Early flights helped hold the crucial Pusan Perimeter, after which they moved north to fight both the enemy and the deep cold of the Korean winter. When Chinese MiG-15 jet fighters entered the war the squadron re-equipped with twin-jet Meteors. The MiGs were controlled by Russian fighter experts who targeted the Meteors, driving them out of 'MiG Alley'. Adopting ground attack with rockets as their main role, they still fought MiGs, ending the war with a five-all draw. It was valuable but very dangerous work and squadron pilots faced a one in four chance of death or capture for much of the war. Their deeds warranted lasting fame. Instead, they became the Forgotten Few of a largely forgotten war; those who read this book will find they deserve better than that.

The Tumbling Sky

An account of the 1st Battalion, Gloucestershire Regiment, at the Battle of Imjin River during the Korean War and the survivors' captivity in a POW camp. In April 1951, at the height of the Korean War, Chinese troops advanced south of the 38th parallel towards a strategic crossing-point of the Imjin River on the invasion route to the South Korean capital of Seoul. The stand of the 1st Battalion, the Gloucestershire Regiment, against the overwhelming numbers of invading troops has since passed into British military history. In The Edge of the Sword General, Sir Anthony Farrar-Hockley, then Adjutant of the Glosters, has painted a vivid and accurate picture of the battle as seen by the officers and soldiers caught up in the middle of it. The book does not, however, end there. Like the majority of those who survived, the author became a prisoner-of-war, and the book continues with a remarkable account of his experiences in and out of Chinese prison camps. This book is not an attempt at a personal hero-story, and it is certainly not a piece of political propaganda. It is, above all, an amazing story of human fortitude and high adventure.
